DATASET DESCRIPTION

10-minute station observations of wind for Germany

Version: v23.3

Publication date: 2023

Cite data set as:	10-minute station observations of wind for Germany, Version v23.3

ABSTRACT

These data originate from the stations of the DWD and legally as well as qualitatively equal partner networks.
Extensive station metadata (station relocations,instrument changes, reference time changes, algorithm changes) are included with the download.

The dataset is divided into:
- directory ./historical/ , a versioned part with completed quality check
- directory ./recent/ , a daily updating part, for which the quality check has not yet been completed
- directory ./now/ , an hourly updating part for which the quality check has not yet been completed
- directory ./metadata/ , a daily updating part with the metadata about the stations, their instruments and measurement rules.

DATASET DESCRIPTION

Parameter	wind direction, wind velocity
Unit(s)	degree, m/s
Statistical processing	time series, 10-minute mean, standard deviation
Temporal coverage	1989-07-03 -- ...
Spatial coverage	stations in Germany
Projection	WGS 84 (EPSG:4326)
Format description	In the folder historical/ for each station a zip-archive is provided. The naming schema of the zip-archives is: *_{product_code}_{station_id}_{begin_date}_{end_date}_hist.zip. The measurements are assigned to a time stamp in MEZ before the year 2000, and to a time stamp in UTC from the year 2000 dedicated.

Format description The file zehn_min_ff_Beschreibung_Stationen.txt contains information on the recent geographical position and the temporal data coverage per station.

Format description In the folder meta_data/ for each station a zip-archive is provided.
The zip-archive contains the meta-information about the station, instruments and algorithms.

The naming schema of the zip-archives is: *_{product_code}_{station_id}.zip

Format description In the folder now/ for each station a zip-archive is provided.
The naming schema of the zip-archives is: *_{product_code}_{station_id}_now.zip.
The time stamp is given in UTC.

Format description In the folder recent/ for each station a zip-archive is provided.
The naming schema of the zip-archives is: *_{product_code}_{station_id}_akt.zip.
The time stamp is given in UTC.

SLA_10	[\standard deviation of the lateral windspeed during the previous 10 minutes\,\missing_value=-999\]		NUMBER	990.0
SLO_10	[\standard deviation of the longitudal windspeed during the previous 10 minutes\,\missing_value=-999\]		NUMBER	990.0
FF_10	[\mean wind speed during the previous 10 minutes\,\missing_value=-999\]	m/s	NUMBER	990.0
DD_10	[\mean wind direction during the previous 10 minutes\,\missing_value=-999\]	°	NUMBER	990

Quality Information The QUALITAETS_NIVEAU (QN) shows the quality control procedure applied for a data report (of several parameters) for a certain reporting time.

QN = 1 : only formal control;
QN = 2 : controlled with individually defined criteria;
QN = 3 : automatic control and correction;

DATA ORIGIN

These data are from the station networks of Deutschen Wetterdienst and legally as well as qualitatively equal partner networks. For details on the measurement procedures VuB 3 Beobachterhandbuch (DWD, 2014a), VuB 3 Technikerhandbuch (DWD, 2014b) and VuB 2 Wetterschlüsselhandbuch (DWD, 2013).

RESOURCE MAINTENANCE

In the now/ directory, the data is updated at a frequency of < 1 h. The data of the previous day is exchanged on a rolling basis until the last available measurement.
Quality control has not yet been completed for these data, so there may always be changes in the values.

In the directory historical/ the data files are updated annually.
Quality control has been completed for this data, so that the values for the version are constant.
During the annual version change, both corrections and historical additions are incorporated.

In the directory recent/ the data files are updated daily. On a rolling basis, the data of the last 500 days - up to yesterday - are exchanged.
Quality control has not yet been completed for these data, so there may always be changes in the values.

VALIDATION AND UNCERTAINTY ESTIMATE

The quality check and uncertainty assessment routines are explained in Kaspar et al., 2013. In addition to automated tests that check completeness, temporal and spatial consistency and compare them against statistical thresholds (QualiMet software, Spengler, 2002), an additional manual quality control is carried out.

UNCERTAINTIES

The stations in the DWD monitoring networks are set up and operated according to WMO regulations. Stations in the equivalent partner networks may deviate from WMO regulations.

Depending on the application, local, regional and influences changing with time should be considered, which can be location- and parameter specific. Sources of long-term uncertainty are (1) changes in station height when station was re-located, information on this is within the station's zip-files in Metadaten_Geographie*.
Uncertainties are also expected from (2) changes in instrumentation, see Metadaten_Geraete* and possibly also from (3) varying quality control procedures (Behrendt et al., 2011).
Further, uncertainties are known to come from (4) errors during data transfer or errors in the software, (5) change of observing personnel, and (6) others, see Freydank, 2014.

CONSIDERATIONS FOR APPLICATIONS

When using the "historical/", "recent/" and "now" directories together, the temporal overlap
and the different type of quality control must be taken into account.

Data sets with quality level QN=1 may contain significant errors. Users have to decide whether for their particular application the more error-prone 10-minute data should be used or rather higher quality data (hourly or daily values).

When investigating long-term changes or trends, consider the station-specific metadata provided in Metadaten_Parameter*, Metadaten_Geraete*, and Metadaten_Geographie*, which are provided for each station in the directory "meta_data/" as a zip file.

ADDITIONAL INFORMATION

For the most recent data the quality control is not completed yet. There are still issues to be discovered in the historical data. We welcome any hints to improve the data basis (see contact).
